

BINARE'S IOT SECURITY PLATFORM

V E R S U S

X-RAY MACHINE

COMPARING FEATURES OF BINARE'S PLATFORM AND X-RAY MACHINE

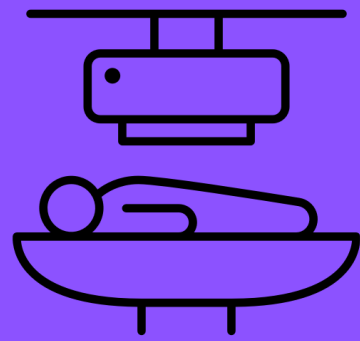

Binare's platform can scan the whole IoT firmware for security vulnerabilities.

Binare's platform can identify components in the firmware and scan them for vulnerabilities.

After vulnerabilities have been identified, Binare's professional services can advise on how to fix them.

Binare's automated firmware analysis platform provides security for many life-critical IoT devices like an X-ray machine, in particular.

X-ray machine can take a picture of the whole leg of a human for injuries.

X-ray machine can take a picture of separate parts of the whole leg: knee, foot or toe.

After the injury has been identified in the X-ray photo, a doctor can advise on how to treat it.

Creation of an X-ray machine can be seen as a big step forward in medicine that has made it possible to save many people's lives.
